                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                       The sequence is an internal transcribed spacer (ITS) region from Fusarium culmorum, isolate 62215. The ITS DNA sequences are useful for detecting Rhizoctonia cerealis, a fungal pathogen of wheat causing Sharp eyespot, for monitoring disease development in plant population, and for providing detailed information on the development and spread of specific pathogen races over extended geographical areas. The DNA sequences are specifically used as primers in PCR-based analysis for the identification of fungal pathotypes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New internal transcribed spacer DNA sequences, useful for identifying fungal pathogen, particularly Rhizoctonia cerealis, and for monitoring disease development in plant population.

The methods ar primers are useful for identifying fungal isolates of fungal pathogens and monitoring of disease development in plant populations. The present sequence represents an internal transcribed spacer RNA encoding sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to the detection of a fungal pathogen comprising isolating DNA from a plant leaf infected with a pathogen. The methods ar primers are useful for identifying fungal isolates of fungal pathogens and monitoring of disease development in plant populations. The present sequence represents an internal transcribed spacer RNA encoding sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to the detection of a fungal pathogen comprising isolating DNA from a plant leaf infected with a pathogen. The methods and primers are useful for identifying fungal isolates of fungal pathogens and monitoring of disease development in plant populations. The present sequence represents an internal transcribed spacer RNA encoding sequence. (Updated on 27-OCT-2003 to standardise OS field)

The invention provides a DNA molecule isolated from the ribosomal RNA gene region of a fungal pathogen, where the DNA molecule consists of an ITS sequence selected from ITS1 and ITS2 of Fusarium culmorum, Fusarium graminearum, Fusarium moniliforme, Septoria avenae or Microdochicum nivale. A method for detecting F. graminearum, F. culmorum, F. moniliforme, F. poae, F. avenaceum and M. nivale isolates is also provided. The method comprises isolating DNA from a plant leaf infected with at least one of the above pathogens and amplifying parts of the ITS sequence of the pathogen(s) by PCR using specific primers from within these sequences. The pathogen(s) are detected by visualising the amplified part of the ITS sequence. (Updated on 17-OCT-2003 to standardise OS field)

The primer pairs, based on the ITS sequences, are used for the PCR amplification detection of wheat Microdochium and Fusarium fungal pathogens, especially M. nivale, F. graminearum, F. culmorum, F. avenaceum, F. poae, F. moniliforme or F. roseum. The two different strains of fungi show different symptoms during infection, which may or may not be due to infection. Early identification of the strain causing the infection allows early, and more specific fungicidal treatment. (Updated on 25-MAR-2003 to correct PR field.) Sequence 96, Application US/08887480
Patent No. 5814453
GENERAL INFORMATION:
APPLICANT: Beck, James J
TITLE OF INVENTION: Detection of Fungal Pathogens Using the TITLE OF INVENTION: Polymerase Chain Reaction
                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TELEFAX: (919) 541-86

                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score

/note="Vector: pBluescript SK+; Site 1: EcoRI; Solate: 2sp2; cDNA was prepared from polyA+
EcoRI; isolate: 2sp2; cDNA was prepared from polyA+
enriched RNA The cDNA was ligated into Lambda gtl1 from
Stratagene and packaged using Gigapack packaging extracts.
An aliquot of the amplified library was used to transduce
E. coli Y1090 and phage DNA was purified from a liquid
lysate. The cDNA inserts were gel purified after EcoRI
digestion and ligated into pBluescript SK+. Aliquots of
the ligation were used to transform E. coli DH5alpha which
were plated onto medium with X-gal for selection of
recombinants."

/note="Vector: pBluescript SK+; Site 1: EcoRI; Site 2:
/note="Vector: pBluescript SK+; Site 1: EcoRI; Site 2:
EcoRI; isolate: 2sp2; cDNA was prepared from polyA+
enriched RNA The cDNA was ligated into Lambda gtl1 from
Stratagene and packaged using Gigapack packaging extracts.
An aliquot of the amplified library was used to transduce
E. coli Y1090 and phage DNA was purified from a liquid
lysate. The cDNA inserts were gel purified after EcoRI
digestion and ligated into pBluescript SK+. Aliquots of
the ligation were used to transform E. coli DH5alpha which
were plated onto medium with X-gal for selection of
recombinants."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Stratagene and packaged using Gigapack packaging extracts. An aliquot of the amplified library was used to transduce E. coll Y1990 and phage DNA was purified from a liquid lysate. The cDNA inserts were gel purified after EcoRi digestion and ligated into pBluescript SK+. Aliquots of the ligation were used to transform E. coll DH5alpha which were plated onto medium with X-gal for selection of

/clone_Tyector: pBluescript SK+; Site_1: EcoRI; Site_2:
EcoRI; isolate: 2sp2; cDNA was prepared from polyA+
enriched RNA The cDNA was ligated into Lambda gtl1 from
Stratagene and packaged using Gigapack packaging extracts.
An aliquot of the amplified library was used to transduce
E. coli Y1090 and phage DNA was purified from a liquid
Iysate. The cDNA inserts were gel purified after EcoRI
digestion and ligated into pBluescript SK+. Aliquots of
the ligation were used to transform E. coli DHSalpha which
were plated onto medium with X-gal for selection of

/state="wector: pBluescript SK+; Site_1: EcoRI; Site_2:
EcoRI; isolate: 2sp2; cDNA was prepared from polyA+
enriched RNA The cDNA was ligated into Lambda gt11 from
Stratagene and packaged using Gigapack packaging extracts.
An aliquot of the amplified library was used to transduce
E. coli Y1090 and phage DNA was purified from a liquid
lysate. The cDNA inserts were gel purified after EcoRI
ligate. The cDNA inserts were gel purified after EcoRI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /note="Vector: pBluescript SK+; Site 1: EcoRI; Site 2: EcoRI; isolate: 2sp2; cDNA was prepared from polyA-enriched RNA The cDNA was ligated into Lambda gtll from Stratagene and packaged using Gigapack packaging extracts. An aliquot of the amplified library was used to transduce E. coli Y1090 and phage DNA was purified from a liquid lysate. The cDNA inserts were gel purified after EcoRI digestion and ligated into pBluescript SK+. Aliquots of the ligation were used to transform E. coli DH5alpha which were plated onto medium with X-gal for selection of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       recombinants.

/note="Vector: pBluescript SK+; Site 1: EcoRI; Site 2:
/note="Vector: pBluescript SK+; Site 1: EcoRI; Site 2:
EcoRI; isolate: 2sp2; cDNA was prepared from polyA+
enriched RNA The cDNA was ligated into Lambda gtl1 from
Stratagene and packaged using Gigapack packaging extracts.
An aliquot of the amplified library was used to transduce
E. coli Y1090 and phage DNA was purified from a liquid
lysate. The cDNA inserts were gel purified after EcoRI
digestion and ligated into pBluescript SK+. Aliquots of
the ligation were used to transform E. coli DH5alpha which
were plated onto medium with X-gal for selection of
recombinants."
